SecureDocs Virtual Data Room Announces Integration With Fujitsu ScanSnap

The SecureDocs Virtual Data Room and Fujitsu ScanSnap partnership makes moving sensitive paper documents online, easier.

SANTA BARBARA, Calif. (PRWEB) April 27, 2018 -- SecureDocs, a virtual data room used by companies across the world to securely store and share critical business documentation, has announced an integration with Fujitsu ScanSnap. This partnership makes it easy for SecureDocs users to quickly move hard copy signature documents, and other documents of importance, into SecureDocs utilizing a Fujitsu ScanSnap Scanner.

To take advantage of the integration, data room users can connect their iX500 or iX100 Fujitsu ScanSnap Scanner to their SecureDocs account through a secure connection to ScanSnap Cloud. Once the initial setup has been authorized users can continue to move their sensitive information online with the push of a button, eliminating the need to keep paper copies that could put an organization at risk should the information be misappropriated.

"We are pleased to partner with Fujitsu ScanSnap to offer an easier way for our virtual data room users to move their paper documents online," said Will Reynolds, SecureDocs' CEO. "We understand that when it comes to executing a financial transaction for your business, speed and security are top of mind, and believe that this partnership will support those initiatives and prove to be beneficial to many of our users."
